The Choice is Clear

Seeing Miracles

By Hannah Davis

Have you ever wondered what a miracle really looks like? For someone who's suffering from compromised

vision, seeing clearly can be one of the greatest miracles of all. Baptiste Dejean, M.D., F.A.C.S says, "All of us at the Avery Eye Clinic enjoy working with each patient to find the best possible solution. Any time we're able to improve a patient's sight, it's like a gift...and that's what gives us joy."

Looking to improve the miracle of your sight? Come to Avery Eye Clinic, one of the leading refractive and vision care ophthalmology groups in Texas. From eyeglasses and contact lenses to advanced monitoring for macular diseases and glaucoma, the physicians at Avery Eye Clinic utilize the most advanced technologies. Whether it is general eye care, cutting-edge LASIK, state-of-the-art cataract surgery, or glaucoma surgery, it is the caring approach and extensive training of the surgeons that make the difference. All Avery Eye Clinic ophthalmologists are board-certified and renew their certification every 10 years through continuing education and accreditation examinations.

Long before he finished his training, Dr. Dejean knew he'd found his passion. He says, "I've always been interested in the optics and physiology of the eye and the idea of microsurgery. The advances in the field of LASIK have been simply astounding. We're able to offer our patients blade-free procedures that are approved even for military pilots and astronauts. I utilize both of the leading platforms in LASIK, the Allegretto and VISX, so I can choose the technology that is best for each patient."

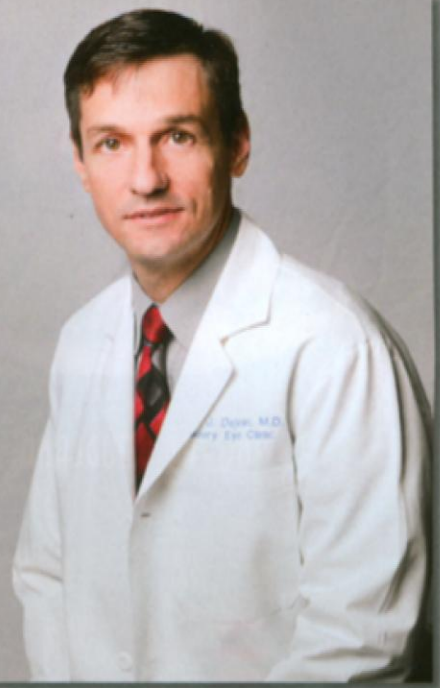

Linda Lin, M.D. says, "Ours

is a collegial field. We enjoy working with other eye care providers and local subspecialists like pediatric ophthalmologists, retinal specialists, and corneal specialists to choose the best therapy for our patients to obtain optimal results. I love treating patients especially when we are able to restore their impaired vision. I can't tell you how many times a patient returns after a successful cataract surgery to thank us and says, 'I just didn't know how much I was missing!'"

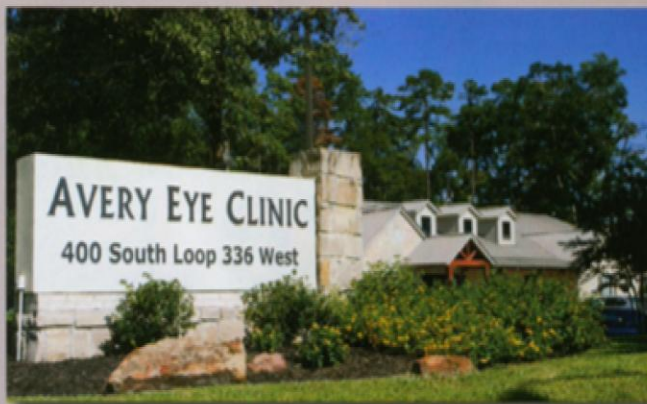

"This field has seen amazing developments," says Craig Kuglen Jr., M.D. "Today, for patients undergoing cataract surgery, we're able to make a much smaller incision and generally use no sutures. Patients see

more immediately after surgery. With newer measuring devices, we can more precisely calculate lens implant powers to reach our targets. This allows us to better utilize toric and multifocal lens implant technology in cataract surgery to correct astigmatism or to provide vision at all distances, eliminating or reducing the need for glasses, including bifocals!"

For thirty years, Avery Eye Clinic has had the privilege of providing expert medical care for conditions of the eye... preserving or restoring the miracle of sight. Dr. Dejean says, "Our entire team takes pride in combining the latest advances in modern eye care with an old-fashioned approach to patient care." ●
